Sheikh Shakhbout Medical City

Year : 2024
Design Intervention : Healthcare facility
Location : Abu Dhabi, UAE
Built-Up Area : 240,000 sq.m

The Sheikh Shakhbout Medical City project features three main blocks: a nine-floor multi-specialty clinic building, a four-floor podium expansion, and a two-floor emergency department building. This extensive project involved the design of hospital spaces, creation of production drawings, FFE (Furniture, Fixtures, and Equipment) schedules, and ceiling plans. Additionally, it required thorough coordination with MEP (Mechanical, Electrical, and Plumbing) systems to ensure seamless integration and functionality.

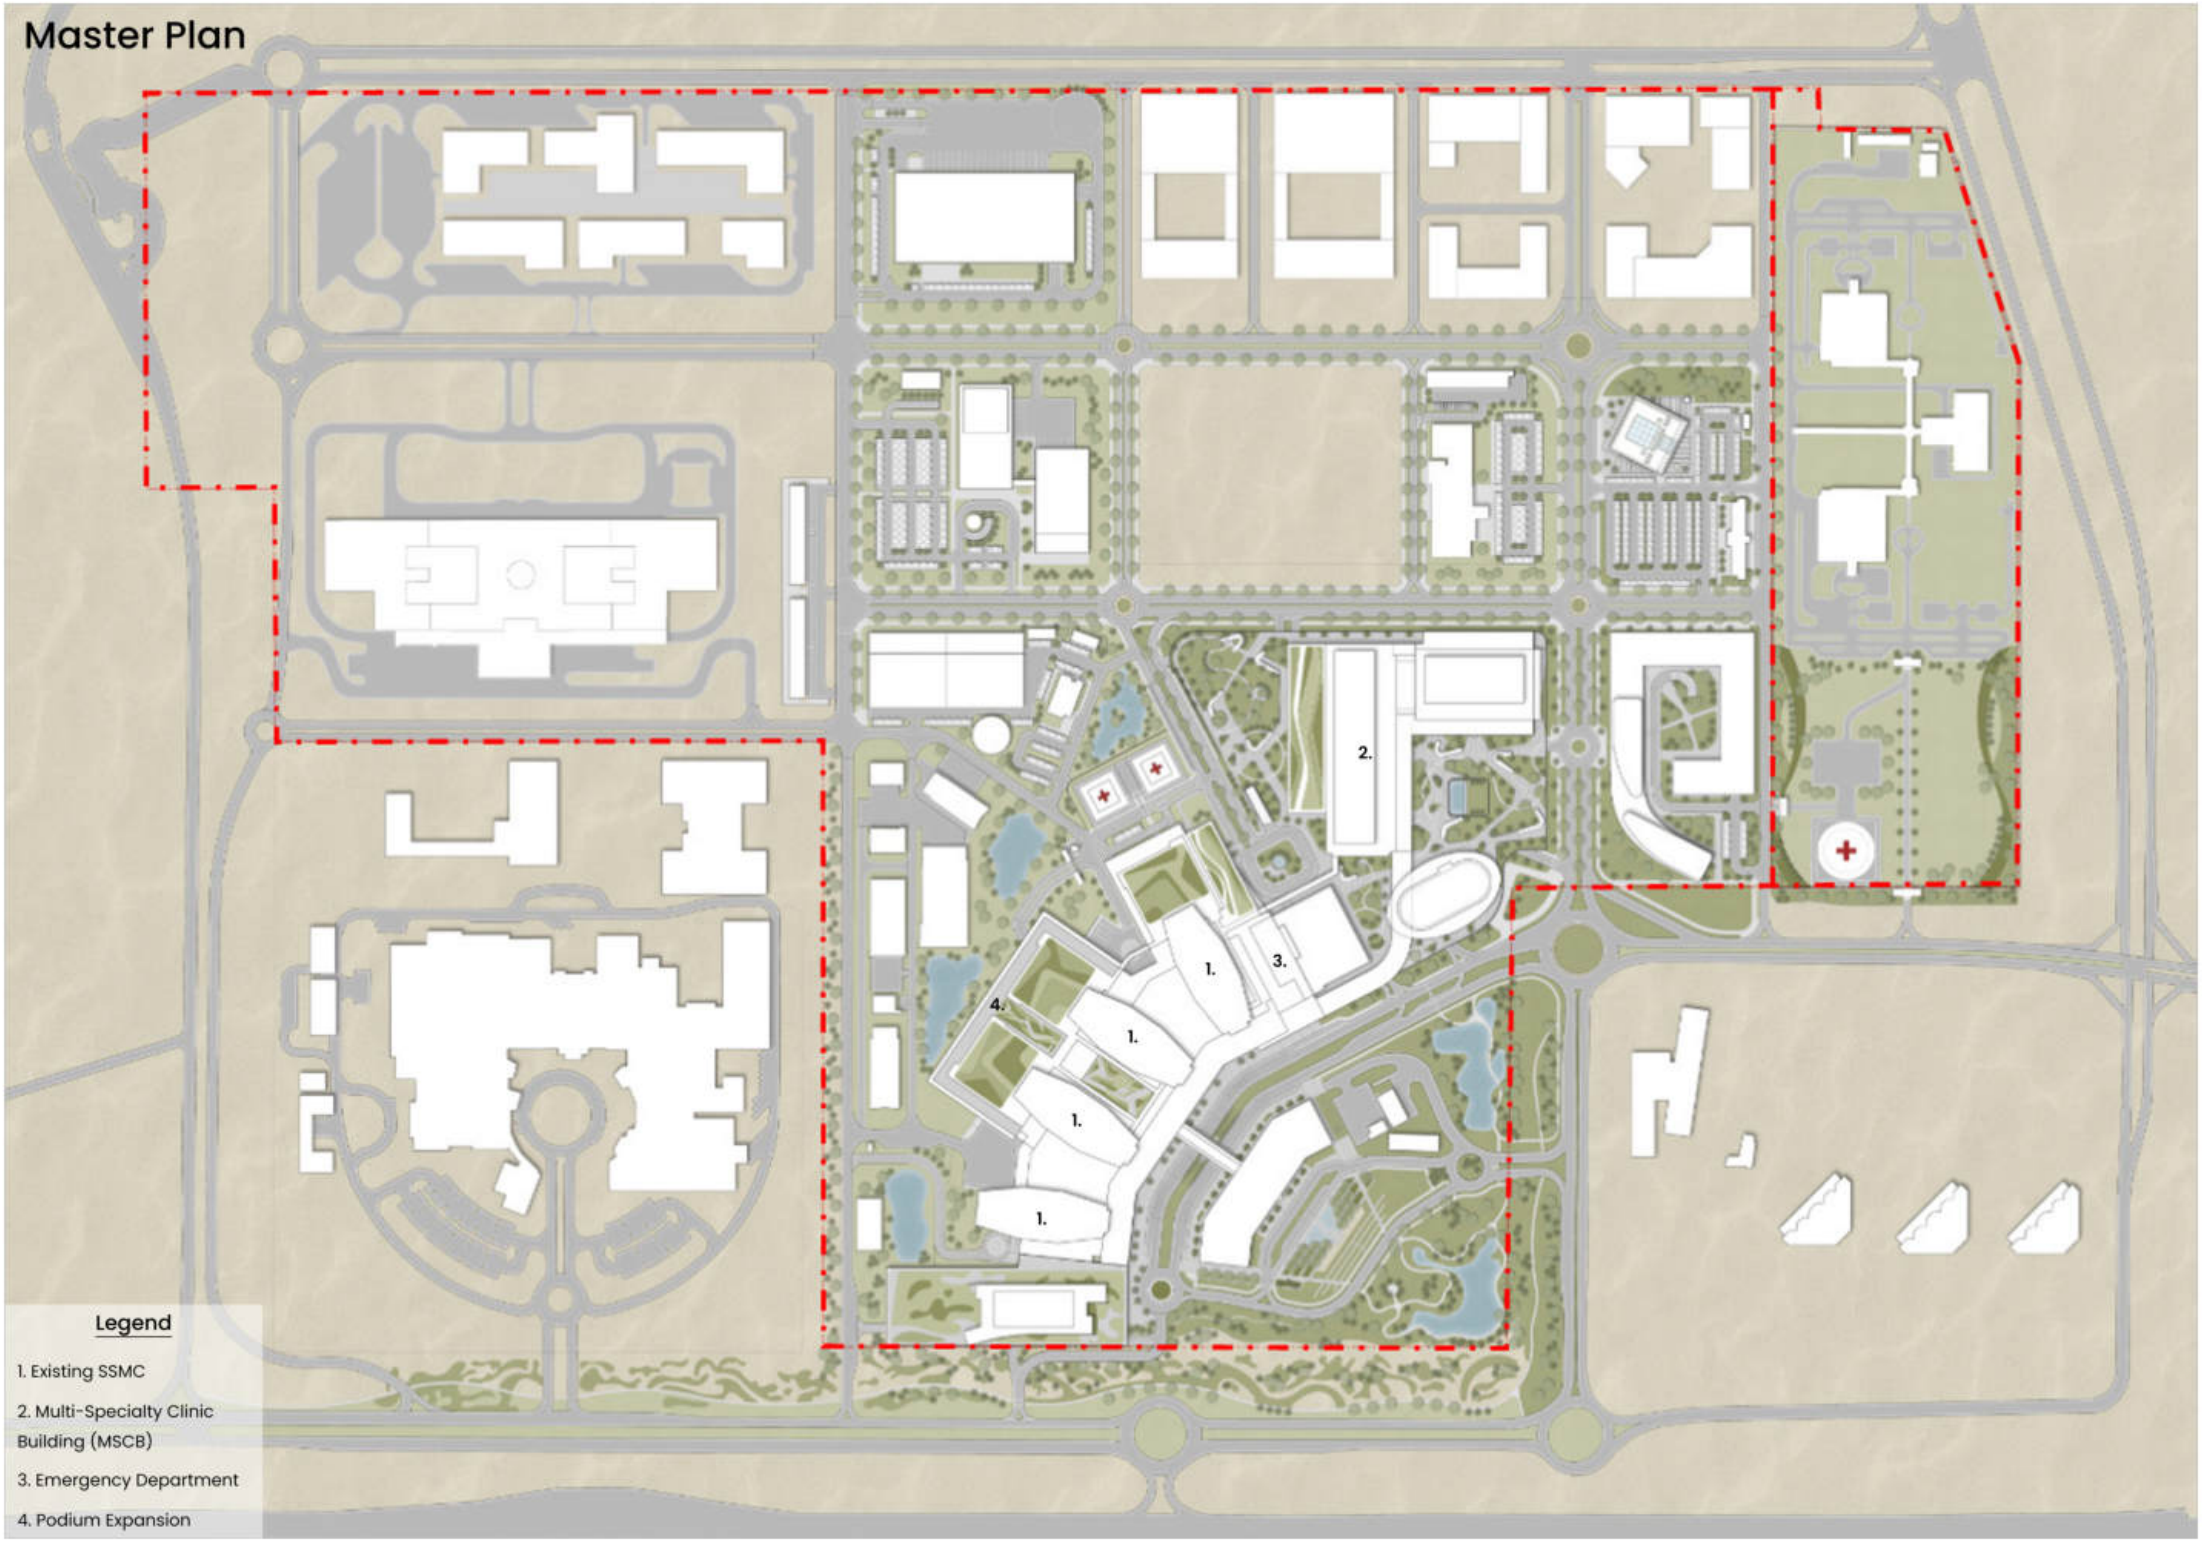

PROGRAM MASSING

BLOCK 1	PODIUM & ED EXPANSION
BLOCK 2	MULTISPECIALTY CLINICS
BLOCK 3	IP EXPANSION, DIAGNOSTICS & PROCEDURES
BLOCK 4	EDUCATION, RESESARCH & CONFERENCING
BLOCK 5	RADIATION ONCOLOGY & PROTON THERAPY
BLOCK 6	ADMIN BUILDING
BLOCK 7	NON-CLINICAL SUPPORT SERVICES, CUP & SUBSTATION
BLOCK 8	OTHER BACK OF HOUSE SERVICES
BLOCK 9	PARKING
BLOCK 10	MOSQUE
BLOCK 11	HOTEL, RETAIL, CAMPUS COMMUNITY CENTER

Design Experience Principles

Human Centered

- Distributed amenities hospitality elements.
- Personal Space/Community space.

Wellness Centered

- Healthy environments to engage the senses.
- Focus on the health and wellness of all.

Sustainable Focus

- Environmental Stewardship
- Material Health

Intuitive & Flexible Design

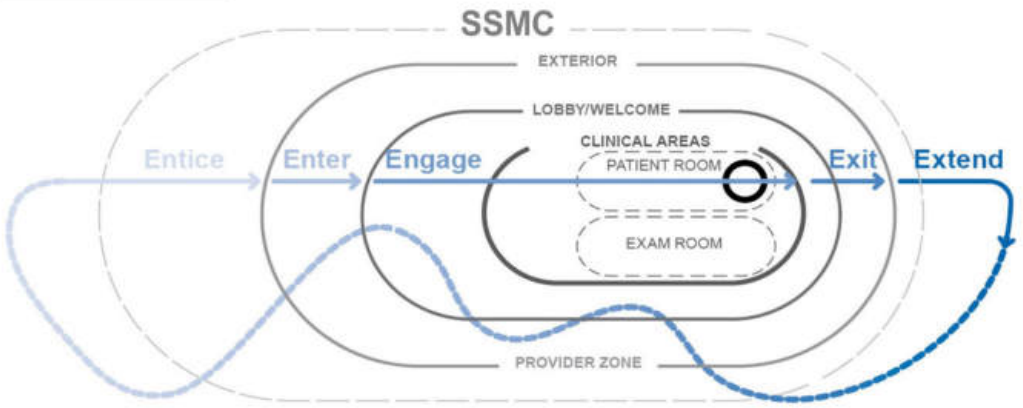

- Technology Enabled
- Intuitive Wayfinding
- Adaptable spaces

Respectful of Culture

- Patients and families as welcome guests

Design Flow Diagram

Conceptual Section To Understand Massing Across Whole Site

Multi-Specialty Clinic Building - Level B2 and level B1 comprises back of house, logistics along with 1000+ parking spaces. Ground level to level 05 consists of pods and departments like Oncology, Radiology, Breast imaging, Hematology etc.

Anahata - Humanizing healthcare

Devising holistic cancer healthcare systems

Year : **2023**
Studio title : **Architectural thesis**
Design intervention : **Cancer hospital and Hospice facility**
Location : **Porbandar, Gujarat, India**
Site area : **50,000 sqm**

Looking at the modern era and its impact on the construction industry and people's lives, a deep gap has been formed between human and his source of existence, nature, and this has multiplied with the advancement of technology and functionalism. Hospitals and healthcare centers have faced with radical transformations and the expectations from these institutions have been increased to cover a wider range of human needs and turn these places pleasant, free from intense pressures and stress. The concept of humanizing spaces and architectural quality means, focusing on the non-physical needs of patients and their interaction with the environment.

14. Doctors 1BHK and guest rooms
15. Mortuary

Form development diagram (Hospice)

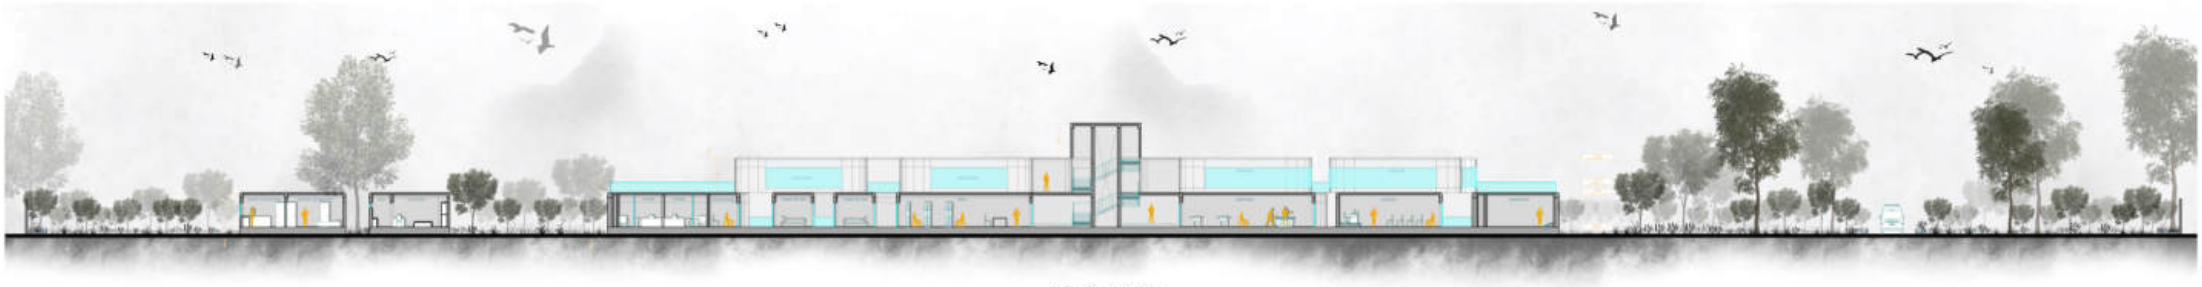

Every patient that enters into this hospice facility has to be disconnected from pain and negativity and conected to joy and peace, the best way to do that would be adding natural elements as their mobility is less, so the views had to be designed such that the exterior nature is carved and brought inside the building.

Ashaval - Internship works

Year : 2022

Studio title : Professional practice

Project titles : Abhipushp (bungalow), Orchard (clubhouse), Qure (Healthcare centre), Treehouse, Saket (Furniture design) and Corporate office

Location : Ahmedabad, Gujarat, India

Selected works of my internship at HSC Designs, a firm which worked on parametric designs and did not limit itself on just architecture but also furniture and product designs. I personally understood a lot about parametric designing and mainly how to produce the drawings that would be easily understandable by workers and contractors.

Ocularcentrism is the privileging of vision over other senses. This concept is even more relevant in today's time when consumption of information visually has increased almost explosively and perception of something depends much on the visual. QURE tries to utilize this idea to create a innovative and creative skin which breaks the visual stereotype of a healthcare typology.

Gyaanganga

Year : 2021
Studio title : Science and commerce campus design
Location : Porbandar, Gujarat, India
Site area : 24,535 sqm

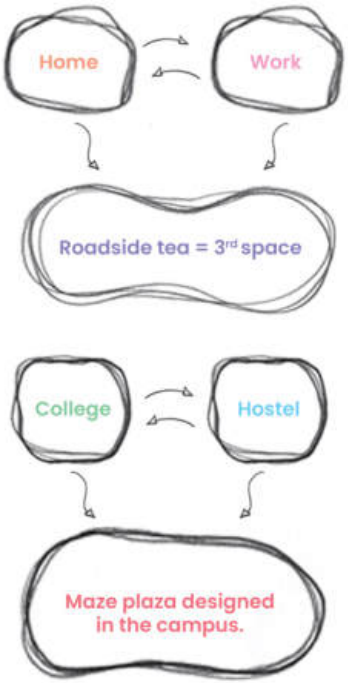

The design brief involved creating a campus for two branches, namely the science and the commerce branch, situated in the hot and dry region of Bagalkot. The campus had cater to the needs of both branches individually as well as provide a common meeting space for both. Moreover, the design had to draw inspiration from renowned architects and incorporate their principles into the final plan. The design aim was to achieve a minimalist yet empowering aesthetic by prioritizing modularity and scalability in the design approach by following the footsteps of Ar. Bhimal Patel.

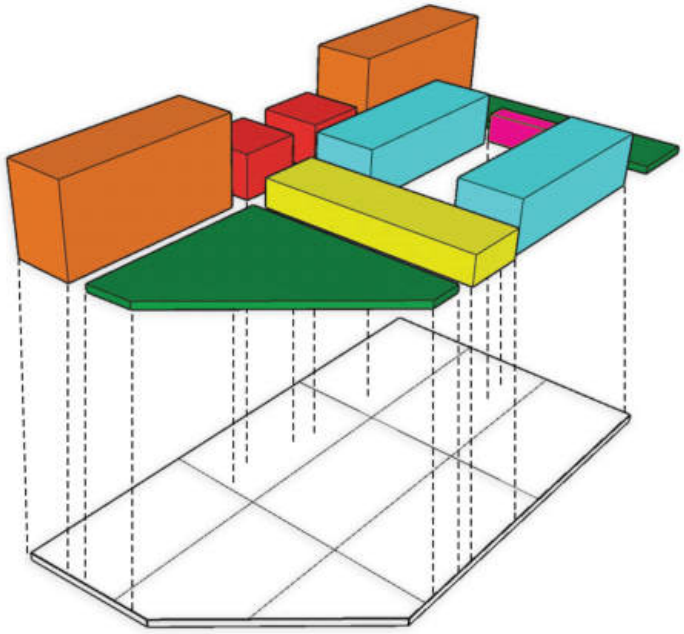

Embracing the design ethos of Ar.Bhimal Patel, I came to recognize that the design of a **campus or any communal area** revolves around the **concept of ease and convenience. Optimal comfort within open spaces materializes when suitable shading and seating provisions** are in place. As such, the entire effectiveness and purpose of a space can be ascertained through this principle. Consequently, I have intentionally incorporated a touch of **openness in areas where averse to crowds, while strategically implementing thorough shading in areas of significance, thereby accentuating the profound importance of those spaces.**

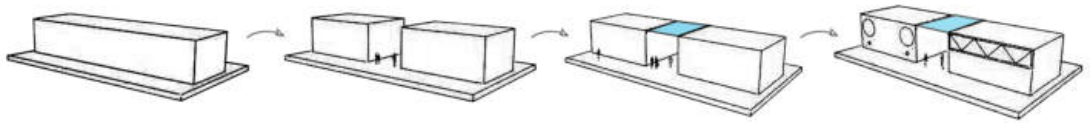

Concept development

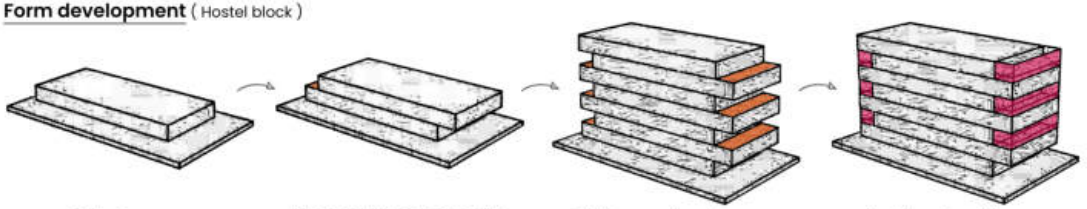

- Open spaces
- Hostel blocks
- Canteen + amenities block
- Administration block + library
- Commerce and science blocks
- Staff residence

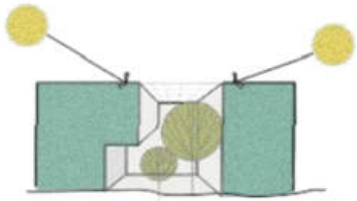

Form development (Administration and library block)

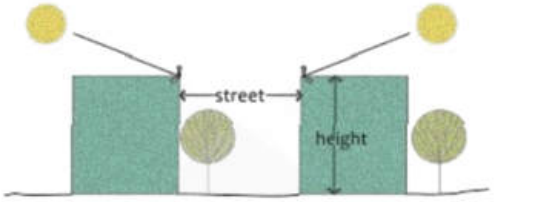

Form development (Hostel block)

Form development (Commerce and science block)

The idea of the "**Third space**" and its intended purpose is centered around holistic approach. The setting has been intricately planned, integrating water elements that amplify the visual attractiveness of the layout and stimulate student involvement during moments of leisure. This area enables students to engage in informal exchanges, nurturing a well-rounded method to advance their cognitive and individual development.

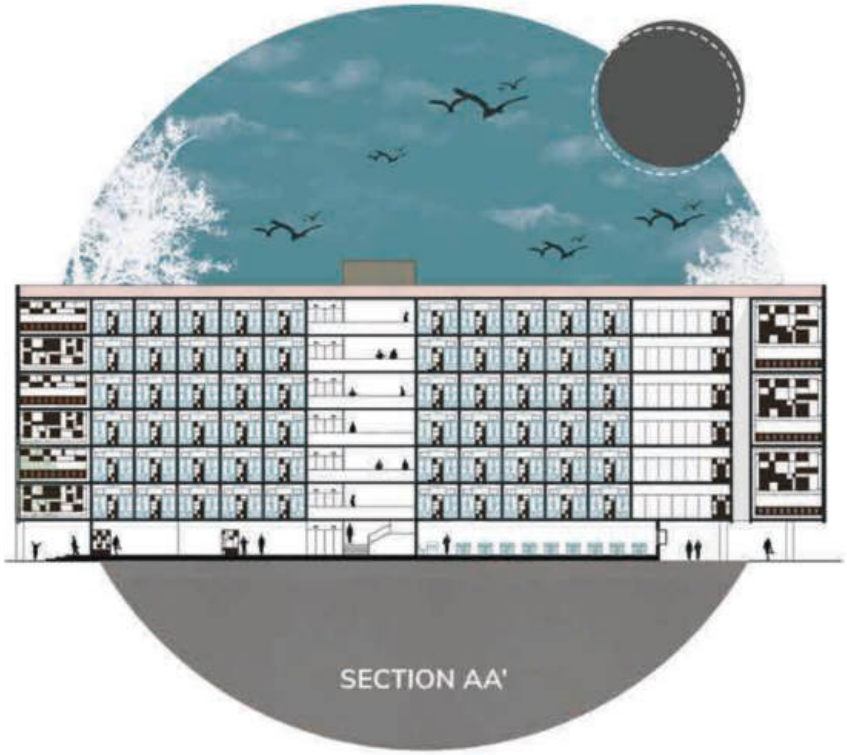

Section AA'

The proportions of the heights of the commerce and science blocks to the courtyard are designed in a way that it ensures the buildings create precise shadows throughout the day.

This design helps maintain a cool temperature in the central courtyard, especially considering the hotand arid weather of Bagalkot and allows the students to gather in the central courtyard throughout the day .

SECTION AA'

SECTION BB'
(Principal's residence)

The school entrance is crafted in a manner where the **administrative section** graces one side and the **library** adorns the other, resulting in a carved-out area that warmly invites students to the primary facilities. Moreover, the central space is thoughtfully designed to offer students a moment of respite, enhanced by the presence of flowers and **landscaping** that instill a sense of **positivity** before they proceed to their designated blocks.

The design of the girls' hostel mirrors that of the boys' hostel, with both featuring similar arrangements of "third spaces" and shared meeting areas. Additionally, there is a volleyball court provided, along with a quaint landscaped area intended for relaxation purposes.

Dyavaprithvi

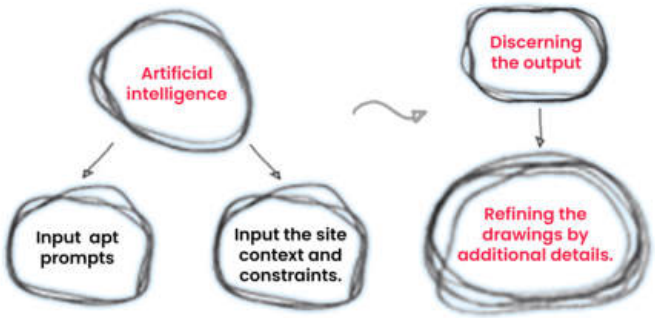

Competition

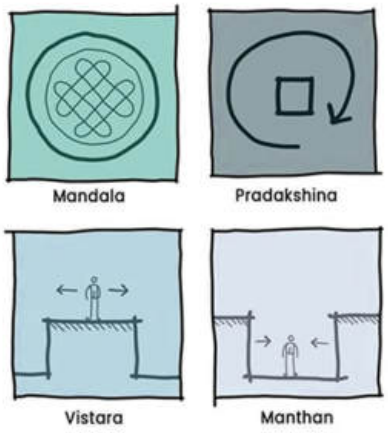

Year : 2022
Design intervention : Memorial structure for Ar. Charles Correa
Location : The kala academy, Goa, India
Site area : 1700 sqm

During the design process of the Kala Academy, following Charles Correa's vision, a specific area was intentionally left open. This space was conceived to facilitate a smooth transition for users, guiding them from enclosed spaces to semi-open areas, ultimately leading to a vast open space. The intention behind this design was to create a moment of pause and contemplation for viewers. In line with this concept, our team made a decision to develop a structure that would minimize additional construction. Instead, we opted to landscape the area, incorporating a maze that would represent Correa's architectural timeline.

Design development

AI outputs :

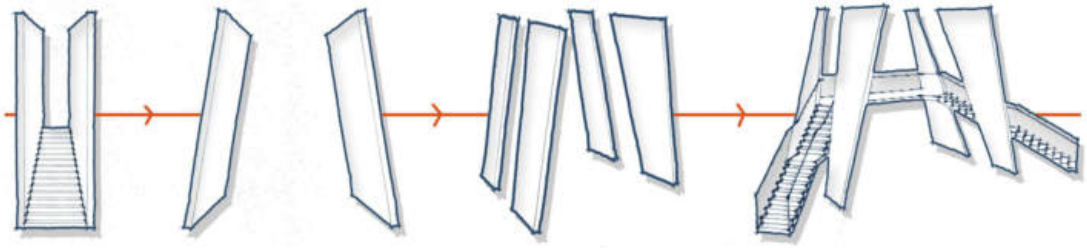

The **key points** from the AI-generated content are as follows:

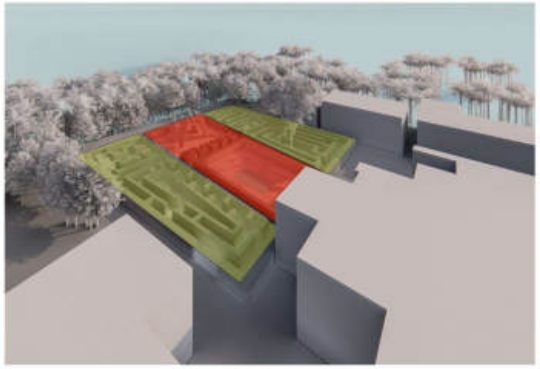

1. The ascending path between solid walls, often called the "**Staircase to heaven**" evokes a sense similar to ascending to paradise.
2. **Concealing** the ultimate **destination** from the observers.
3. Providing an **outdoor experience** with a **ceremonial** walkway.
4. A daring architectural design achieved by utilizing **concrete.**

Final design

The pair of concrete walls, as depicted, incline at a **15-degree angle** towards one another, forming a remblance of the **Namaskar gesture (derived from Sanskrit: "namas," signifying "bowing or homage").** The architectural design adheres to this very notion, symbolizing the memorial's tribute to Ar. Charles Correa. The staircase, in its ascent, imparts a sensation of **ascending into the heavens, aligning with the human perspective that perceives only the sky during the stair-climbing journey.**

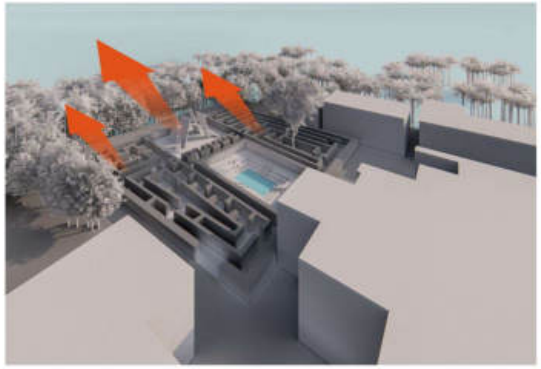

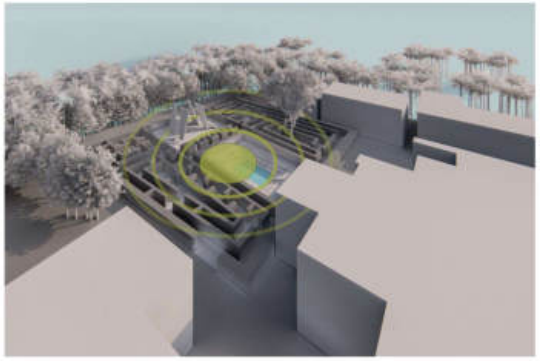

Zoning

- Maze (active space)
- Step-well and Memorial structure (pause points)

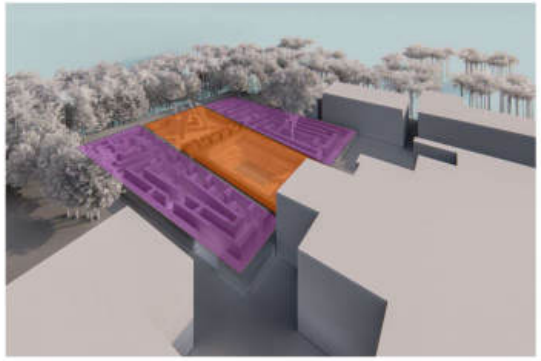

Views

The existing views of the Mandovi River and the watchtower, serving as prominent attractions, necessitated the inclusion of a resting point within the memorial structure.

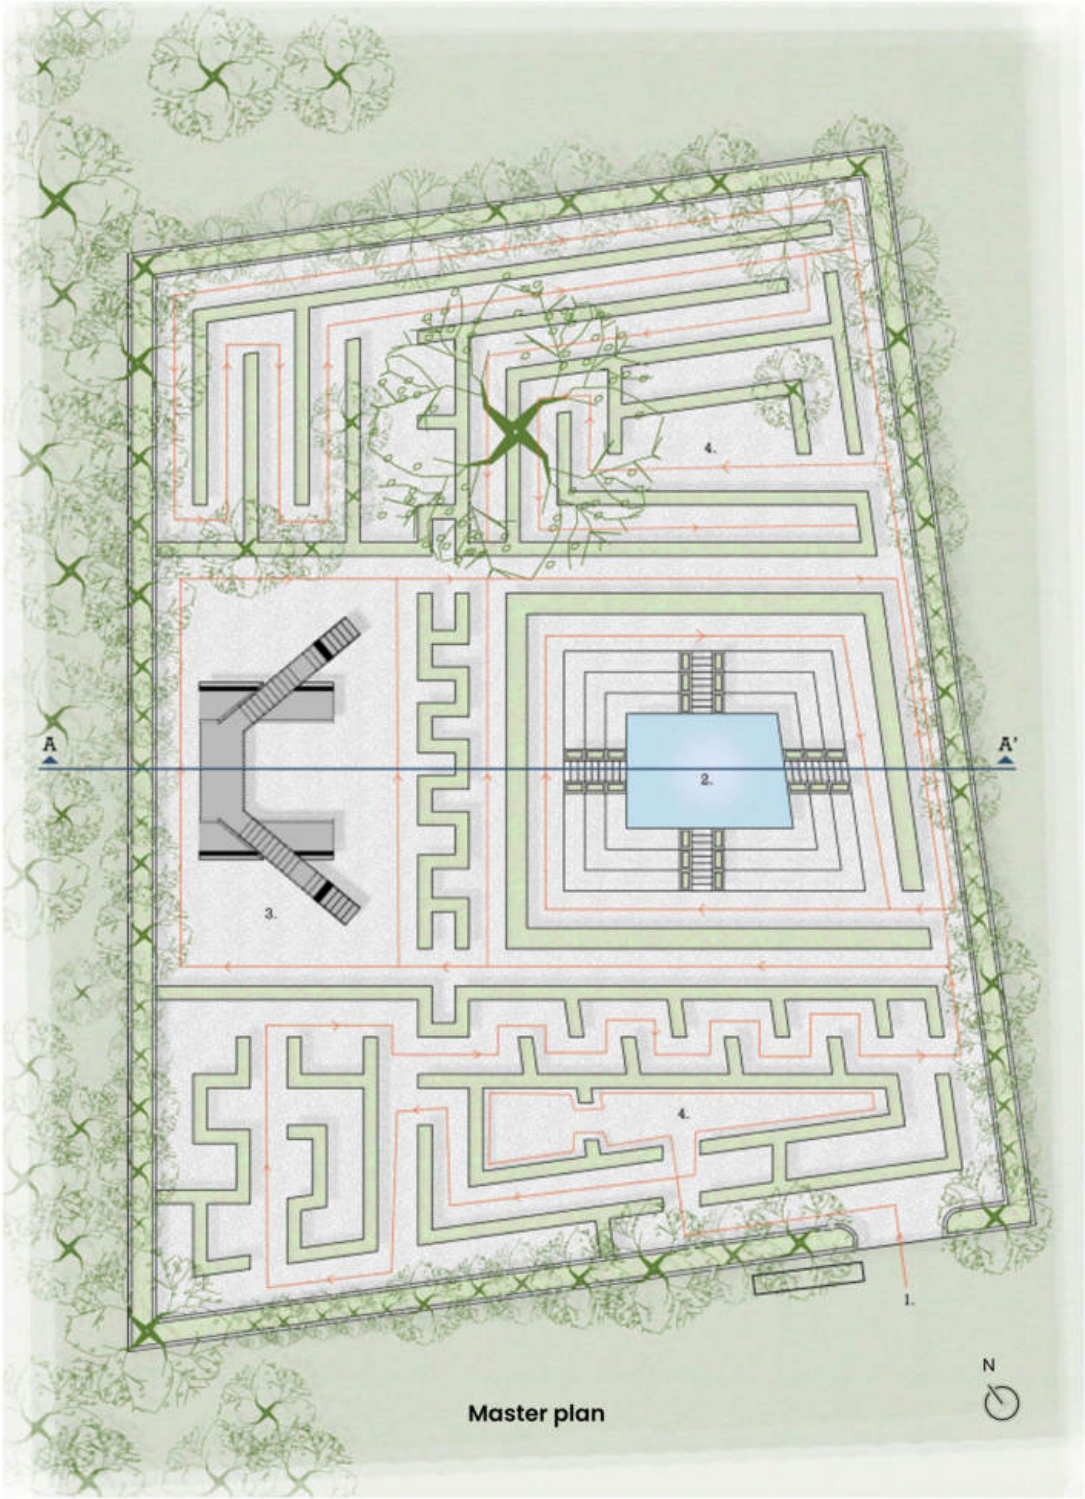

Green spaces

The presence of pre-existing trees guides the design towards a concept that makes use of the trees without disturbing the existing landscape on the site.

Principles of Ar. charles correa

- Pradakshina (ritual path)
- Vistara (a limitless expanse)

Niraivagam

Competition - 2nd prize

Year : 2021
Design intervention : National Design Competition ' Sustainable Forest Resort '
Location : Athirapilly waterfall, Chalakudy taluk, Thrissur district, Kerela, India
Site area : 6070 sqm

The goal was to create a captivating tourist facility that harmoniously blends with the natural forest backdrop and offers a breathtaking view of the falls, providing visitors with an exceptional and unforgettable experience. The resort's design and planning focuses on combining visually appealing architecture with environmentally friendly practices to ensure sustainability. Emphasis was placed on integrating the resort seamlessly into its surroundings and ninimizing the ecological impact of the resort is of utmost importance.

No-Shoe zone

"No Shoe Zone" within the design emerges from a response to the daily mental pressures experienced by individuals. The Earth serves as a rich source of antioxidant electrons that counteract free radicals.

Considering that free radicals bear a positive charge while the Earth's energy is negative, **the transmission of Earth's energy through the body neutralizes one's bodily energy.**

Walking barefoot is associated with diminished toxic stress, the **regulation of stress responses, heightened immunity, and reduced risks to skin health.**

Entrance drop off point

The entire retreat was fashioned using cargo containers, yet certain aspects of the layout, such as the entrance, were meticulously crafted to mirror the architectural style of Kerala. This thoughtful touch aims to evoke a sense of homeliness and familiarity for guests as they step into the resort.

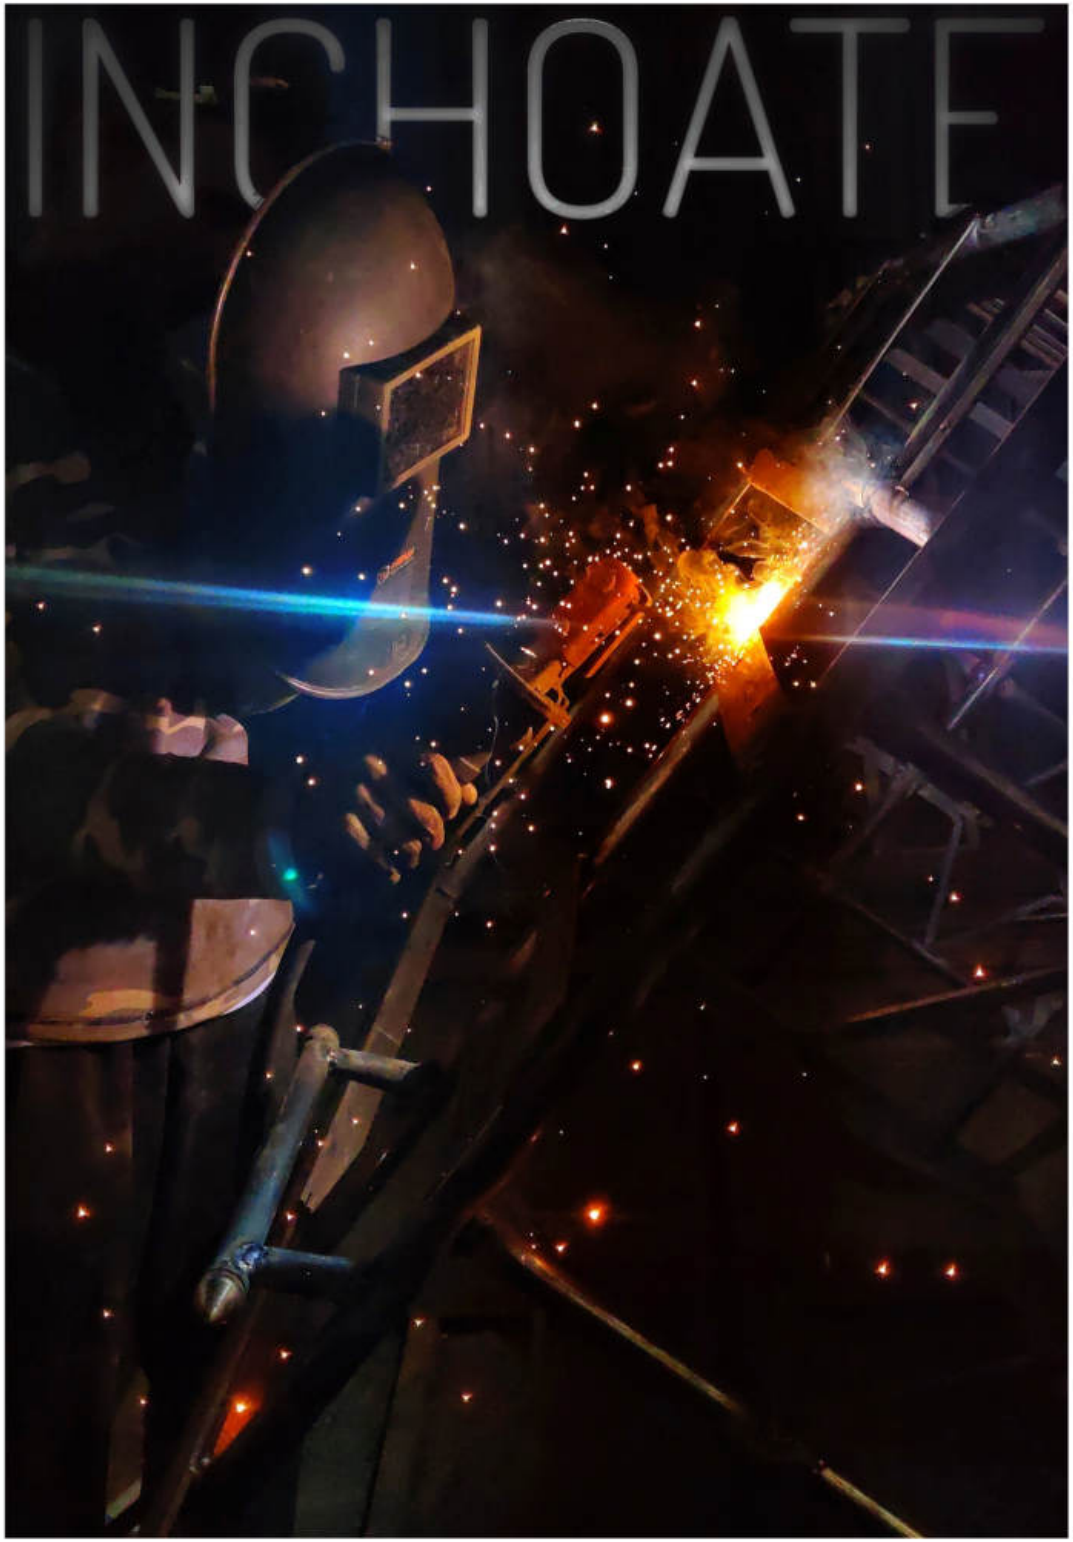

" When you realize you left your jungle gym membership card at home! "

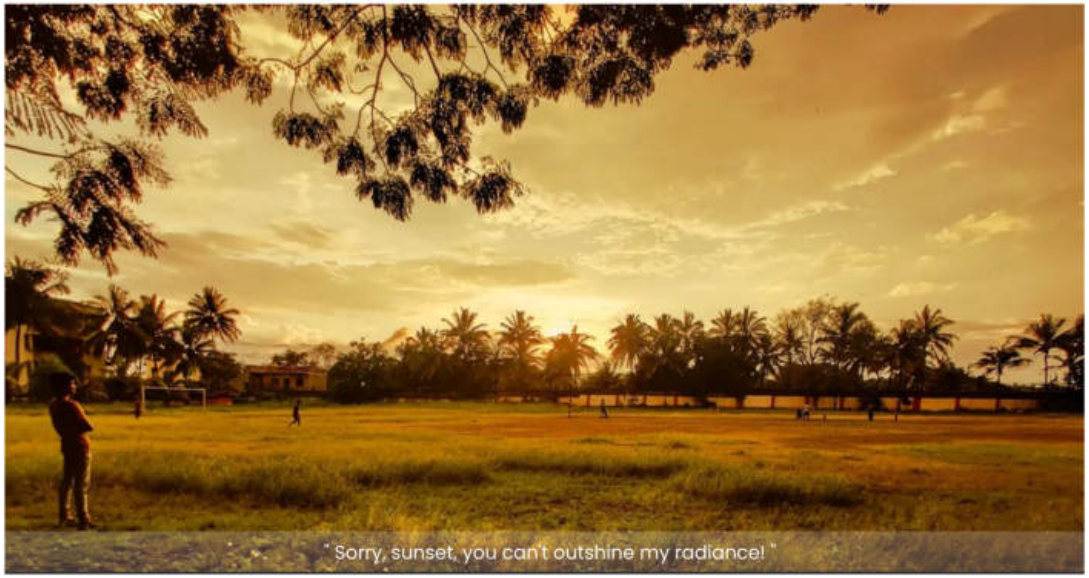

Chitralekhanam

In my perspective, a good photograph comprises two essential elements: The **Idea and the Visual**. These aspects share a strong correlation with architecture. The "Idea" relates to the social impact and design strategies, while the "Visual" represents the articulation and manifestation of the design itself. Engaging in photography enhances my intellectual acuity as it sharpens my skills in capturing moments.

Photography not only helps me appreciate the intricacies of human life in the built environment but also allows me to train my eye to notice subtle details. It enriches my perception and strengthens my ability to craft meaningful images.

WISDOM
" They say 'wise men say,' but I prefer 'wise women say'! "

" Sorry, sunset, you can't outshine my radiance! "

" If cats could talk, they wouldn't " - Nan Porter
